

HAZARDOUS WASTE AND DANGEROUS GOODS REGULATIONS FOR USED LEAD ACID BATTERIES

NOTE: the information provided here is general in nature. Companies must do their own research to understand their legal obligations in each jurisdiction and to ensure that they are fully compliant.

STORAGE OF HAZARDOUS WASTES

All jurisdictions have environmental regulations that place a general duty of care on individuals to protect land, groundwater and the environment (air). ULAB need to be carefully managed to avoid any pollution, for example by storing them under cover and in a bunded area. In some jurisdictions the storage of ULAB requires an EPA licence unless the quantity being stored is below a certain threshold.

TRANSPORT OF HAZARDOUS WASTES

A waste transport licence and a waste transport certificate are required for **intrastate transport** of ULAB in some jurisdictions. Contact your local environmental authority for more information.

Interstate transport of ULAB is governed by a national agreement – the [National Environment Protection \(Movement of Controlled Waste Between States and Territories\) Measure](#) – and administered by state government agencies. The interstate transport of ULAB requires (for **each load** of batteries):

- a consignment authorisation from the environmental protection agency in the destination state or territory
- a waste transport certificate from the agency in the originating state or territory and this must accompany the ULAB load in transit
- a permit/licence for the vehicle transporting the batteries.

The **export of ULAB** is regulated by the Australian Government under the Hazardous Waste (Regulation of Exports and Imports) Act 1989, which meets Australia’s obligations under the Basel Convention. It requires an Export Licence. More information is available from the [Department of Sustainability, Environment, Water, Population and Communities](#).

TRANSPORT OF DANGEROUS GOODS BY ROAD AND RAIL

Lead acid batteries are classified as a Dangerous Good under the [Australian Code for the Transport of Dangerous Goods by Road and Rail \(ADG Code\)](#) - UN No. 2794, Class 8 (corrosive). Any organisation involved in transporting ULAB must comply with the Code.

A dangerous goods (DG) driver’s licence is not required for ULAB as these are regarded as ‘packages’ (regardless of the quantity being carried).

STORAGE AND HANDLING OF DANGEROUS GOODS

The general obligations for any organisation handling dangerous goods (including ULAB) are outlined in the [National Code for Storage and Handling of Workplace Dangerous Goods](#). There are regulations and codes in each jurisdiction governing the storage and handling of dangerous goods.

To improve national harmonisation, the [Model Work Health and Safety Act](#) and [Model Work, Health and Safety Regulations](#) were approved by most State and Territory Ministers in 2011. State and territory laws are being amended in most jurisdictions to reflect the model law, with some necessary local amendments.

The advice provided in the following Australian Standards should also be observed where relevant:

- AS 3780:1994 The storage and handling of corrosive substances
- AS/NZS 3833:2007 The storage and handling of mixed classes of dangerous goods, in packages and intermediate bulk containers.
